

## **New Business SIP Trunking Bundles from Appia Communications | Bundles combine flexible unlimited call paths with key features and minutes**

TRAVERSE CITY, MI - December 01, 2011 - Appia Communications, a leading provider of managed communication and network services, today announced the immediate availability of its new SIP trunking bundles for business voice over IP.

Basic bundles include unlimited call paths, telephone numbers, a toll free number, and as much as 48,000 minutes of local and long distance calling. Enhanced bundles also provide free audio conferencing and 100,000 minutes of usage in the largest package. All of the bundles come with 911, directory listing, and caller name (or CNAM) service.

"We are focused on making it as simple as possible for customers to choose the services that best meet their needs," said Victor von Schlegell, Appia's president.

"Customers can take advantage of convenient bundles with a strong set of features for a great price."

SIP trunking is used to connect to customer phone systems so they can make and receive calls using the public Internet or Appia's own directly connected access. SIP trunking bundles will work with all Appia certified Internet-enabled telephone systems and with most traditional telephone systems.

"Our bundles provide a unique value," said Jason Ulm, vice president of channel sales for Appia. "They include features that smaller and midsize customers either can't find or that they have to buy separately."
