

cloudCOLOCATION | unbeatable service and price

The impact of power outages and natural disasters on priceless business data and customer service is simply too great to take the risk of managing servers on premise.

Organizations are therefore choosing colocation services — moving their line of business applications (LOB) to data centers.

Most colocation services offer a few features but not the whole package, or they offer everything you need, but at a sky-high price. Appia provides the complete solution and at a price you can afford.

We work mainly with small and midsize companies and organizations. These companies usually don't require full cabinets; they need one or a few rack units to house mission-critical servers. So while cabinets and cages are available, our focus is on providing dependable and affordable rack units.

Our data center is centrally located in St. Louis, where some of the lowest power and space costs in the country are found. That's why we can offer our customers data center services at great prices that any organization can afford.

If you require additional redundancy with back-up in two or more locations, Appia can provide it in our Dallas or Chicago facilities.

benefits

■ **Certified** | Our tier 3 data center is SOC2-compliant. It's where we house the equipment we use to serve the thousands of our customers worldwide.

■ **Secure** | Our facility uses state-of-the-art security systems that ensures access only to authorized individuals.

■ **Redundant** | Power companies can't guarantee uninterrupted power, which is why Appia's power supply is fully redundant with an uptime of 99.999%.

■ **Flexible** | One size doesn't fit all. Need something special? We can tailor a solution to fit your specific needs. Use our internet access or choose your own. The Meet-Me room is located on the same floor as our data center and is connected to a wide variety of carriers.

■ **Supported** | Problems seldom occur, but if they do, our Network Operations Center, which is staffed by expert engineers and technicians, is just steps away on the same floor.

Let us show you how you can have first-class colocation service, and rack up the savings.
